# Optimize Compliance Costs with Data Lineage

Organizations are under ever increasing pressure to remain in compliance while adhering to a growing number of regulations – all while undergoing complex audits.

This can create a drain on time, resources, and money. And if you're using manual processes, you're at a significant risk of data quality issues that can make you non-compliant. This issue is compounded in complex data ecosystems where unpacking complex data flows across multiple platforms typically requires engagement with multiple business & technical stakeholders.

Instead, optimize costs with automated data lineage from Manta. With Manta's powerful map of data flows and dependencies, you can expect the following results:

Save Over $5m & Cut Software Release Time by 30%

With Manta's automated lineage, a large international bank was able to reallocate resources from 24 FTEs down to 5 FTEs – an annual cost saving of over $5 million. The additional FTEs were deployed to mission-critical, customer 360 and process automation initiatives that accelerated the organization's digital transformation agenda. In a FTSE 100 Insurance firm, re-assigning engineers to focus on mission-critical projects enabled accelerated transformation and cut their software release time by 30%.

Reduce Stakeholder Engagement by 60%

Not only is it costly to employ multiple full-time engineers directly to complete manual processes, but the time of other stakeholders must be factored in. With Manta, a recent project at a Fortune 500 Financial Services organization uncovered hidden costs across seven different departments.
Reduce Auditor Consultant Fees by 70%

External auditor costs also need to be factored into any TCO calculation. A global Insurance company identified it was able to reduce the complexity and halve the cost of their external audit process by providing auditors with interactive maps of data flows.
